To whom it may concern:

This letter is formally requesting an extension of the expiration of the 3.65 NN license.

We are a rural Wireless Internet Service provider in Northeast Oklahoma. Our company is TERO certified (over 75% Native American owned) with the Cherokee Nation. We have over 2000 subscribers in a completely rural footprint. We currently offer speeds as high as 25 MB download by 5 MB upload. Our company has been in business since 1996. Much of our service area is very under-served. Some only have the option of Satellite Internet providers; which isn't adequate to the needs of voip and telecommuter VPNs.

We currently own a 3.65 NN license. Over the past 3 years we have invested heavily into this frequency by using LTE equipment. We have over 20 base stations with over 200 subscribers running on this system. Our company has a roadmap in place to utilize CBRS GA when it becomes available. We also plan to bid on CBRS PALS when the auctions begin.

We have a great concern that when all NN licenses expire in 4/17/2020, before the CBRS is in place, we will no longer be able to serve current LTE 3.65 subscribers. We would request that the FCC grant a waiver to allow our existing 3650-3700 MHz licenses more time to transition into Part 96 CBRS rules. The Junction Internet LLC would ask that you grant an extension through January 8, 2023 as the last 3.65 MHz license expires.

We are a small company that has invested over \$200,000 in our current LTE infrastructure. Losing the ability to operate in this band would be disastrous to us as a company. Please extend the expiration to 1/8/23.

Sincerely,

Eric Sooter, CEO
The Junction Internet LLC
